

Parking Availability

See exactly where the open on-street parking spots are in over 400 cities across the country.

What is Parking Availability?

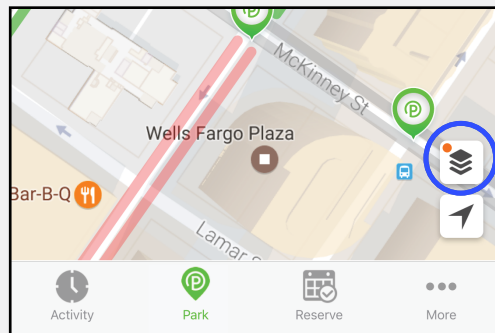

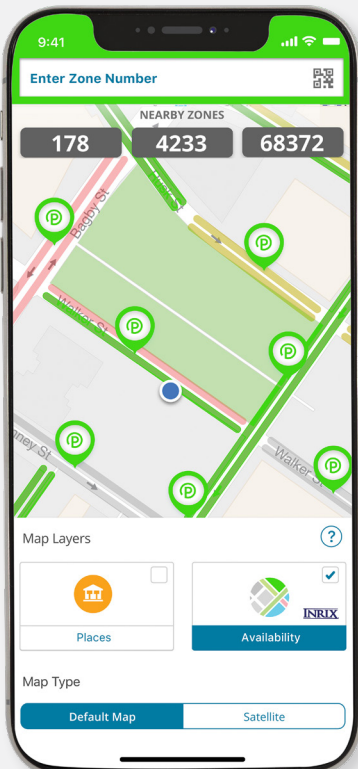

ParkMobile is the first and only app to launch the new, innovative Parking Availability feature. Now, drivers can head directly to areas where there's plenty of parking, and avoid areas where there's no parking. This creates a better experience for people driving around your city, saving them time, frustration, and even money on gas.

How Does it Work?

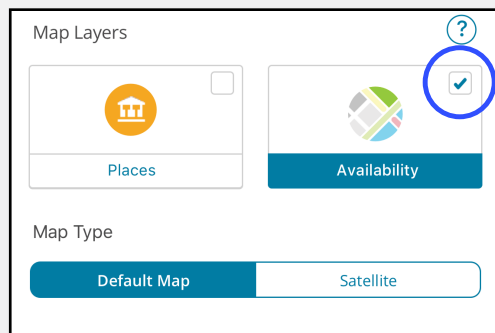

Parking Availability is exclusively for ParkMobile Pro members and is currently available in over 100 markets. When a Pro member turns on the feature, colored lines will indicate how likely they are to find a parking spot on any given street.

How to Read the Colors on the Map

-  A spot is waiting
-  A spot is likely available
-  All spots are likely full
-  No parking

Look for the "Layers" button in the bottom right of the map screen

Check the box in "Availability" to turn on the Parking Availability feature
